

how each dashboard card value is calculated in your code:

### 1. Total Active Patients

- **Logic:**  
Counts patients who have had either an appointment or a history entry on or after today's date.
- **Meaning:**  
This is the number of patients with at least one appointment or dialysis session scheduled for today or later.

### 2. Today's Dialysis Sessions

- **Logic:**  
Counts the number of history entries where the date matches today's date.
- **Meaning:**  
This is the number of dialysis sessions that have been recorded for today.

### 3. Upcoming Appointments

- **Logic:**  
Counts the number of appointments scheduled between now and 7 days from now.
- **Meaning:**  
This is the number of appointments scheduled within the next 7 days, including today.

## Summary Table

Card Name	Calculation Logic	Data Source
Total Active Patients	Patients with appointment/history entry on or after today	patients, appointments, history
Today's Dialysis Sessions	History entries with date === today	history
Upcoming Appointments	Appointments scheduled between now and 7 days from now (inclusive)	appointments

If you want to see the exact code, it is found in the `getDashboardStats` function in your `Home.tsx` file.
